Level 2

# **Flappy Parrot**

These projects are for use outside the UK only. More information is available on our website at <a href="http://www.codeclub.org.uk/">http://www.codeclub.org.uk/</a>. This coursework is developed in the open on GitHub, <a href="https://github.com/CodeClub/">https://github.com/CodeClub/</a> come and join us!

### Introduction

In this project we'll make our own version of the highly popular mobile game Flappy Bird. This project requires Scratch 2.0.

Press the space bar to flap and try to navigate through the gaps in the pipes!

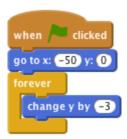

# Step 1: Make Flappy fall

# **Activity Checklist**

	Start a new Scratch project. Delete the cat by right-clicking it and selecting Delete
	Replace the background with an outdoor landscape. desert is a good choice.
	Add the Flappy character. You'll need a sprite with costumes for wings up and wings
	down. <b>parrot</b> is a good choice.
	Change the name of your sprite to <b>Flappy</b> .
	Give Flappy the following script:

# Test Your Project

Click the green flag, does Flappy start in the middle of the screen and then fall to the bottom?

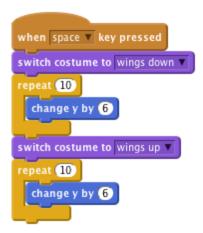

Save your project

# **Step 2: Make Flappy fly**

Next, we want Flappy to flap upwards when you press the space bar.

- Click on the **Costumes** tab and name the costumes wings up and wings down.
  - Now switch back to the **Scripts** tab and add this script:

### **Test Your Project**

**Click the green flag**, are you able to control Flappy with the space bar? Do you notice that sometimes you press the space bar but Flappy doesn't move? We'll fix that next...

Save your project

# **Step 3: Fix the controls**

We'd like Flappy to respond every time we press the space bar. But when we push the space bar Flappy begins two loops of movements. If we push the space bar again before these loops have finished, Scratch ignores the second press. To solve this, we'll use a variable to count up how many flaps we need to do.

Disconnect the blocks under the when space key pressed and put them to the side (we'll use them in a few moments.)

Make a new variable For this sprite only and call it flaps.

Add the following script by draging in the blocks you put aside:

```
when clicked

set flaps v to 0

switch costume to wings up v

forever

repeat until flaps = 0

change flaps v by -1

switch costume to wings down v

repeat 10

change y by 6

switch costume to wings up v

repeat 10

change y by 6
```

Finally, add to your when space key pressed event:

# **Test Your Project**

Click the green flag, does Flappy now flap once for each time you press the space bar?

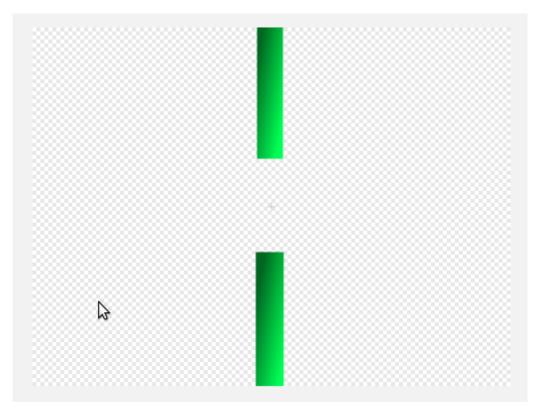

# Step 4: Add the pipes

Next we'll add some obstacles for Flappy to fly through.

Click on the Paint new sprite button.
Name your costume <b>pipe</b> .
If the costume is in Bitmap Mode click on the Convert to vector button.
Click on the Zoom — so that you can see the entire drawing area.
Click on the Rectangle, pick a colour, and click on the Filled rectangle button.
Click and drag two boxes, one from the top middle and one from the bottom middle as
shown:

- You can shade your pipes by clicking on the Color a shape button and click on the Horizontal gradient button. Choose two shades of the same colour one for the foreground and one for the background. When you click to fill the shapes, the colours will fade between your chosen colours.
- Name your sprite **Pipe**.

# Step 5: Make the pipes move

Next we'll make the pipes move and arrange them randomly to provide an obstacle course for Flappy.

### **Activity Checklist**

Click on your **Pipe** sprite and select the Scripts tab.

Add the following scripts:

```
when clicked
hide
set size to 200 %
forever
create clone of myself v
wait 2 secs

when I start as a clone
go to x: 240 y: pick random -80 to 80
show
repeat 120
```

change x by (-4)

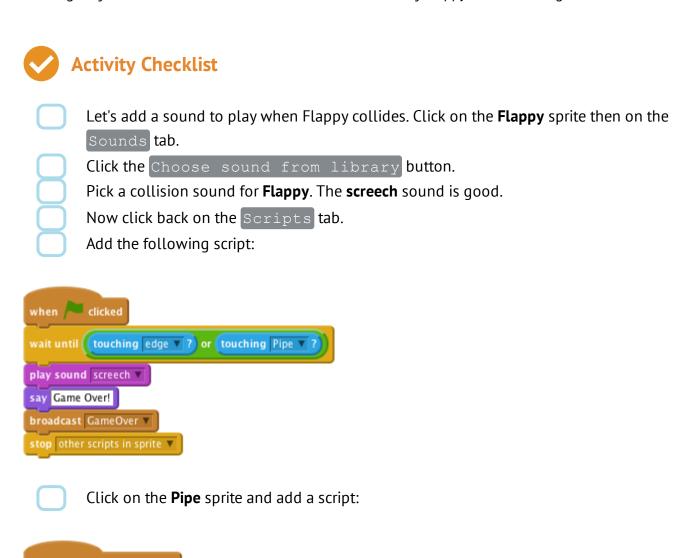

# **Test Your Project**

**Click the green flag**, do pipes appear with gaps to fly through at different heights? If you find it difficult to navigate Flappy through the pipes without touching them, you can make the gap bigger in the **pipe** sprite by editing the costume.

# **Step 6: Detect collision with the pipes**

To make the game a challenge, the player needs to guide Flappy through the gaps without touching the pipes or the edges of the screen. Now we'll add some blocks to detect if Flappy hits something.

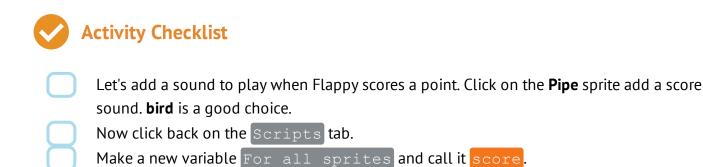

Click the green flag, does the game end when Flappy touches a pipe or the edge of the screen?

# Step 7: Add scoring

The player should score a point every time Flappy makes it though a pipe. Let's add that next.

Add a block to set the score to 0 when the flag is clicked.

Add the following block:

# **Test Your Project**

Click the green flag, does the player score points for flying Flappy through the pipes?

# Save your project

# Things to try

$oldsymbol{1}$ . How many ways can you make this game easier or harder

2. Well done you've finished the basic game. There are more things you can do to your game though. Have a go at these challenges!

# Challenge 1: add a high score Make a new variable and tick the Cloud variable (stored on server) box. Call the variable ni-score when the game is over check if you need to set a new high score: when I receive GameOver if score then set hi-score to score

# **Test Your Project**

Click the green flag, does your score update the hi score?

Save your project

# Challenge 2: add gravity

When something falls under gravity it doesn't usually fall at a fixed rate. For this challenge we will make Flappy fall as if under gravity.

Add a new variable For this sprite only to **Flappy** and call it rise.

Change Flappy's falling script:

```
when clicked

set rise v to 0

go to x: -50 y: 0

forever

change y by rise

change rise v by -0.4
```

And change Flappy's flapping script:

```
when clicked

set flaps to 0

switch costume to wings up v

forever

repeat until flaps = 0

change flaps by -1

switch costume to wings down v

change rise v by 8

wait 0.2 secs

switch costume to wings up v

wait 0.2 secs
```

**Test Your Project** 

Click the green flag, does Flappy now accelerate when falling and flapping?

# Save your project

# Challenge 3: fall off screen

When the player loses make Flappy fall off the bottom of the screen before ending the game.

Replace the broadcast GameOver block with broadcast Fall
Now add the following scripts:

```
repeat 10
turn ) 5 degrees
```

```
repeat until (y position < -180)

change y by rise

change rise v by -0.4

hide

broadcast GameOver v
```

Don't forget to add a show block and reset Flappy's direction when the game restarts.

### **Test Your Project**

**Click the green flag**, does Flappy now fall off the screen after hitting a pipe? Does Flappy reappear in the correct orientation when restarting the game.

Save your project

### Well done you've finished, now you can enjoy the game!

Don't forget you can share your game with all your friends and family by clicking on **Share** on the menu bar!
